Hi, is it possible to address the onboard piezo buzzer on a APU4D4 from within the OS? Alternatively, are there any GPIO pins that could be used to add an external piezo buzzer?

Thanks,

Alan

Hi @a_px ,

The apu2 has an onboard PC Speaker compatible buzzer. If you're running Linux, you can follow the steps from ArchWiki (https://wiki.archlinux.org/title/PC_speaker#Beep) to make the speaker produce sounds.
